

Hosted Exchange 2007

Increase Productivity, Mobility and Security

Hosted Exchange gives you secure enterprise-level mobile messaging capabilities at a fraction of the cost of an in-house system. Give employees the freedom to balance work, travel and personal time with anywhere access to email in a completely secure environment.

Make Downtime Productive. Check email in airports, on trains, at tradeshow or anywhere you find yourself connected to the Internet. Hosted Exchange's ActiveSync seamlessly synchronizes with your mobile device, giving you and your employees access to contact lists, calendars and email on smart phones, PDAs and other mobile devices.

Work Together Efficiently. Build strong teams by keeping team members connected. Shared calendars ensure that meetings never conflict. Shared folders give employees access to information from a central location. And shared contact lists save time by putting important addresses and phone numbers at your fingertips everywhere you go.

Let Experts Manage Your Server. Microsoft-certified professionals handle all of the Exchange software upgrades, downloads and server maintenance, freeing you to focus on growing your business.

Protect Your Data. Our hosted Exchange solution includes nightly data backups stored in state-of-the-art data centers. Your information is safe with industry-leading security measures and a 99.99% uptime guarantee.
