

Microsoft SharePoint Services

Share Knowledge Across Your Business

Integrate your company with a Microsoft SharePoint portal. It's a completely secure internal Web site with a central document library, discussion boards, surveys and personalized Web pages for employees. SharePoint is your gateway to effective internal communications.

Streamline Busywork and Focus on Important Projects.

SharePoint's tracking process automatically details changes and approvals on business documents and deliverables, eliminating the need to follow projects around the office to compile input.

Open and Manage Communication Lines with Employees.

Replace long strings of back-and-forth email conversations with efficient discussion boards. You can create discussions and approve responses before they're posted in the portal.

Decrease Costs and Increase Productivity. You don't have to hire additional staff or upgrade your facilities to house a server to enjoy the benefits of a SharePoint portal. Microsoft-certified professionals handle the technical details of maintaining your SharePoint server in data centers already equipped with industry-leading safety and security.

SharePoint Features:

- Document file versioning, sub folders and check-in/checkout
- Lists of links, announcements, contacts, events and more
- Discussion boards
- Surveys with exportable results
- Personalized and shared Web pages
- Powerful search function
- 99.99% uptime guarantee

Plan	Users	Disk Quota	Traffic
